

PT TANAH LAUT Tbk.
(the Company)
ANNOUNCEMENT
BUSINESS DEVELOPMENT AND PARTICIPATION
IN DOWNSTREAM COCONUT PROGRAM

In connection with the Company's commitment to contribute to the development of the coconut sector in Indonesia, the Company announces that it will actively participate in the coconut downstreaming program which is part of the national policy initiated by President Prabowo Subianto. The program is designed to achieve the Golden Indonesia Vision 2045, where coconut downstreaming is one of the leading commodities in supporting the success of the national program.

Indonesia is rich in coconut resources, and the Company believes that this potential can be maximised to improve the welfare of the community and provide added value for shareholders. In this effort, the Company has received support from the Indonesian Coconut Council (Dekindo) to succeed the coconut downstreaming program.

Currently, the Company has carried out a comprehensive mapping of aspects related to coconut production and downstreaming which includes the development of coconut derivative products. The Company is also in the finalisation stage of negotiations with plans for three land purchase options in Pangandaran Regency. This move is expected to strengthen the supply chain of derivative production, increase the production capacity of high-quality coconut, and diversify our product line to meet the growing market demand.

The Company is optimistic that this strategic move will have a positive impact on growth and increase shareholder value. The Company invites all shareholders to continue to support the steps we are taking in developing this business.

Thank you for your attention and support.

Sincerely,

Board of Directors of PT Tanah Laut Tbk
